

April Mean Daily Minimum Temperatures

The map shows the mean daily minimum temperatures for April. Minimum temperatures in April are below freezing for most of Canada. Minimum temperatures in April are below freezing for most of Canada. Only extreme southern Ontario, extreme southern Nova Scotia and coastal British Columbia have normal minimum temperatures above freezing. This represents a major warming from January values for all of southern Canada, but winter conditions still dominate the north.

April Mean Daily Minimum Temperatures (°C)

The mean daily temperatures for the spring season are represented by the month of April, middle of the spring season and are intended to represent average conditions only, as the weather in any given year during spring would or could vary. The 1971 to 2000 temperature climate normals were calculated by Environment Canada and the monthly minimum average was computed from the daily minimum temperature observations. Spatial models have been developed using the thin plate smoothing spline algorithms of ANUSPLIN by the Canadian Forest Service in partnership with several staff in Environment Canada's Meteorological Service of Canada and the Australian National University (the creator of ANUSPLIN).
