THE DECLINATION OF THE COMPASS NEEDLE, 1948.

The declination of the compass needle at any place along a red line is the declination given on that red line. At other places the declination is between those given on the neighbouring red lines; thus at the place marked A, the declination is between N. 8° W. and 9° W. The easterly declinations of the compass needle are decreasing 6 minutes annually.
