THE DECLINATION OF THE COMPASS NEEDLE 1959

The declination of the compass needle at any place along a broken line is the declination given on that broken line. At other places the declination is between those given on the neighbouring broken lines; thus at the place marked A, the declination is between  $39^{\circ}00'$  E and  $39^{\circ}30'$  E. The declination of the compass needle is decreasing 8 minutes annually.

Produced and printed by the SURVEYS AND MAPPING  
BRANCH, DEPARTMENT OF MINES AND TECHNICAL  
SURVEYS, 1959, from air photographs taken in 1950.
