PHOTOGRAPHY PHOTOGRAPHIE

Figure 1 shows a schematic diagram of a 100-MVA power transformer. The primary winding has 1000 turns and the secondary winding has 100 turns. The diagram illustrates the tap positions and tap changer ratios for both windings. The primary winding has taps at 16, 101, 56, 37, 16, and 113. The secondary winding has taps at 24, 93, 28, 134, and 105. The tap changer ratios are 7/57, 7/57, 6/57, 7/56, and 7/56. The transformer is labeled with its capacity 100 MVA and the number of turns 1000 and 100.

EXAMPLE OF METHOD USED
TO GIVE A REFERENCE TO NEAREST 100 METRES
EXEMPLE DE LA METHODE EMPLOYEE
POUR FIXER DES REPERES A 100 METRES PRES

The figure is a scatter plot with a grid. The y-axis is labeled with 97, 98, and 99. The x-axis is labeled with 96, 96, 97, and 98. There are two main clusters of data points. One cluster is centered around x=96.5 and y=98.2, consisting of approximately 15 points. The other cluster is centered around x=97.5 and y=98.2, consisting of approximately 15 points. There are also a few scattered points at lower y-values, around 97.5 and 97.8.
